

Basics Of Geometry, Angle And Its Parts

Q#01: Identify each statement as "True" or "False".

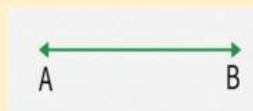

- (i) In angle GLE, G is the meeting point of two rays. (True / False)
- (ii) $\overrightarrow{GN}$ and $\overrightarrow{GT}$ are the arms of $\angle TGN$. (True / False)
- (iii) 5.7cm is the same as 5cm and 7mm. (True / False)
- (iv) A ray has a fixed length. (True / False)
- (v)  The shape is representing line AQ. (True / False)

Q#02: Look at the given angle carefully, and choose the correct option.

- (i) The vertex of the given angle is _____.
- (ii) Name of the given angle is _____.
- (iii) Symbolic form: $\angle EWK$ / $\angle WEK$
- (iv) Arms of the angle are the _____ EK and $\overrightarrow{WE}$.
- (v) The amount of turn between two rays is called a/an _____.

Q#03: Match each shape with its name.

Ray

Line segment

Point

Line

Q#04: Select the correct option from the given options.

- (i) The meeting point of two rays of an angle is called:
 (a) vertex (b) arm (c) line
- (ii) A collection of points in a straight path with no end points is called:
 (a) point (b) line segment (c) line
- (iii) A line segment has _____ end point(s).
 (a) 2 (b) 1 (c) zero
- (iv) A _____ has one end point and can be extended in other direction.
 (a) line segment (b) ray (c) line
- (v) There are _____ millimetres in one centimetre.
 (a) 1 000 (b) 100 (c) 10
