

Topic: Darwin and Natural Selection.

Evolution vocabulary: Some examples of scientific concepts are listed below. Match each example with the correct concept.

Adaptation

Evolution

Variation

1. In a population of sheep, some are brown and some are white

2. An insect avoids predators by looking like a leaf.

3. A new species of plants develops and another species dies out.

Darwin notes: Go to the DE platform and find the missing words in the next text.

Natural selection

On the morning of December 27, 1831, the _____ sailed out of a harbor in Plymouth, England, and did not return for five whole years.

Charles _____ first arrived on the Galapagos islands off the coast of Ecuador in 1835. On the islands, Darwin discovered many _____ that he had never seen before. He also observed that some animals had characteristics that were _____ from island to island. These included _____ with different types of shells and finches with different types of beaks. Eventually Darwin's observations would lead him to one of the most important theories in biology, the

_____ y _____.
