

1. Write the value of A if $B = 3 \times 5$ and $A = B^2 \times 12$

2. Write the value of C if $C = B^{3 \times 3}$, and $B = \text{square root of } 12$.

3. Look at the formula given:

$$A = \frac{(b \times h)}{2}$$

Use the formula to calculate the following:

A triangle base 12,5, and height 6,5

4. Write down all factors of 12.

5. Simplify $3a + 4b + 2a + 5b$
