

Arrange the following paragraph into a good narrative text

1	The cooperative approached the Edinburgh City Council with the clear idea of developing solar energy projects on the city's many public buildings. The city council welcomed the initiative.
2	In 2015, the Edinburgh Community Solar Co-operative launched a fundraising campaign. With £1,4 million of shares purchased by residents, the first projects were funded. In 2016, the first solar installations entered into force, producing more than 1,1 GWh of electricity in the first year. A second share issue was launched in October 2020, raising £660,000. These funds financed the installation of photovoltaic panels on seven new city-owned buildings.
3	The Edinburgh City Council supports the creation of a cooperative to invest in rooftop-solar.
4	In 2015, Edinburgh was lagging behind when it comes to the roll-out of rooftop solar, with many residents living in flats without direct access to their roofs. A collective of citizens founded the Edinburgh Community Solar Co-operative, which aims to enable citizens to share ownership of solar installations on city buildings and contribute to the development of solar energy in their city.
5	Despite all the challenges of the COVID-19 crisis, the good relationship between the citizens' group and the local government led to the success of the second phase of solar installation in 2021. The city council provided a strong foundation for the project, while the cooperative brought citizens together, ready to contribute to Edinburgh's goal of becoming a carbon-neutral city.
6	Today, the Edinburgh Community Solar Co-operative produces solar power on 30 buildings in Edinburgh and more will follow. Profits go directly to the members and the community through a Community Benefit Fund established in 2018.
