

Part I – Reading

Read the text and select “True”, “False” or “Not mentioned” for each statement.

Artificial Intelligence in Our Daily Life

Artificial intelligence, or AI, is becoming part of our daily life. Many people use AI every day, but they do not always know it. AI is technology that helps computers learn, think, and solve simple problems. It cannot think like a human, but it can help people do many tasks faster and more easily.

One common example of AI is the voice assistant on a phone. People can ask it questions like, “What is the weather today?” or “Set an alarm for 7:00.” The phone understands the question and gives an answer. Many people also use AI to play music, find directions, or send messages without typing.

At school, AI can help students learn English, mathematics, science, and other subjects. Some apps explain difficult words, check spelling, or help students practice pronunciation. Teachers can also use AI to create quizzes, games, and classroom activities. However, students should not copy everything from AI. It is important to read, think, and learn by themselves.

At home, AI is also useful. Some people have smart speakers that turn on the lights or play their favorite songs. Robot vacuum cleaners clean the floor without much help. Some refrigerators can even remind people to buy more food. These tools save time and make daily life more comfortable.

In hospitals, doctors use AI to study medical images and find health problems more quickly. AI can also help organize patient information. This does not replace doctors or nurses. Instead, it helps them work more efficiently and spend more time with patients.

Many people use AI when they shop online. Shopping websites suggest clothes, books, or games that people may like. Streaming services recommend movies and TV shows based on what people watch. These suggestions can help people discover new things, but sometimes they spend more time online because of them.

AI also has some challenges. Sometimes it gives incorrect information. It can make mistakes because it does not understand everything like a person does. People should always check important information, especially for school, work, or health.

Another challenge is privacy. Some AI systems collect information about users. For this reason, people should be careful about what they share online. Using strong passwords and protecting personal information are good habits.

In the future, AI will probably become more common in our homes, schools, and jobs. New technology may help people solve problems, learn new skills, and communicate

with others around the world. AI is an exciting tool, but people should use it wisely. When humans and AI work together, daily life can become easier, safer, and more interesting.

1. AI can help people complete some tasks more quickly.
2. Voice assistants can answer questions about the weather.
3. The text says that AI can think exactly like a human.
4. Students should use AI without checking its answers.
5. AI can help students practice pronunciation.
6. Robot vacuum cleaners can clean the floor.
7. The text says that every family has a smart speaker at home.
8. Doctors use AI to study medical images.
9. AI completely replaces doctors and nurses in hospitals.
10. Shopping websites can recommend products that people may like.
11. The text says that AI always gives correct information.
12. People should protect their personal information online.
13. The text says that AI was invented in 2020.
14. AI may become more common in homes, schools, and jobs in the future.
15. The text says that students spend two hours every day using AI.

Part II – Writing

Topic: AI in My Daily Life

Write 8-10 sentences about how artificial intelligence can help you in your daily life.

Include the following ideas:

- What AI tool do you know or use?
- How can it help you at school or at home?
- What is one advantage of AI?
- What is one disadvantage of AI?
- Do you think AI will be more important in the future? Why?

Useful vocabulary: AI, phone, app, learn, help, homework, music, directions, smart speaker, easy, useful, careful, future.

Useful sentence starters:

I use AI to...

It helps me...

One advantage is...

One disadvantage is...

In the future, I think AI will...
