The Amazing World of Bees

Bees are small insects that play an important role in our world. They are not only known for making honey, but they also help plants **1.** and produce fruits and seeds.

Bees visit flowers to collect nectar, a sweet liquid. They use nectar to make honey, which provides them with food. As bees move from one flower to another, they carry tiny grains of pollen. This helps plants **2.** and produce fruits and seeds.

Bees live together in groups called colonies. In a colony, the queen bee lays eggs, while worker bees collect food and care for the young bees. Most bees are not **3.** if people leave them alone, but they may sting when they feel threatened.

Bees are important to farmers because they help grow many of the foods we eat, such as apples and watermelons. However, bees face problems due to the loss of their **4.**, the use of harmful **5.** and climate change.

We can help bees by planting flowers, avoiding harmful **6.** and keeping gardens clean. We should also protect green spaces where bees can find food and shelter.

Even small actions can make a big **7.**. By protecting bees, we help plants, animals and people enjoy a healthier **8.**.
