

Computer Vocabulary III

- a specific computer record. It could contain data such as text (eg essay.doc), or a program such as paint.exe.

- a particular sort of lettering (on the screen or on paper). Arial is a font. Times New Roman is another.

- All hard disks and floppy disks have to be electronically prepared for use by a process called formatting. Hard disks are pre-formatted by the computer manufacturer. If you buy a floppy disk that is not pre-formatted, you format it yourself, using a program that comes with your PC.

- the equipment inside a computer that creates the image on the screen

- the main disk inside a computer used for storing programs and information. It is hard because it is metal. See floppy disk.

- an area that has an available wireless signal for Internet access (usually public)

- a small image or picture on a computer screen that is a symbol for folders, disks, peripherals, programs etc

- International network of computers that you connect to by telephone line. Two popular services of the Internet are the World Wide Web and electronic mail.

- a tablet computer created by Apple.

- kilobytes, megabytes, gigabytes. Used to measure computer memory and storage.
