Making art with found materials is not a new idea. Recycled paper, cloth and metal goods can become important pictures and sculptures. An artist near Washington, D.C. just had her recycled art on exhibit at the Prince George's African American Museum and Cultural Center in Maryland. She uses a material found in every American home.

Plastic bags are not costly to produce. They are also strong and easy to carry. This is why they are a popular container in much of the world.

But they are also a major source of pollution. It can take hundreds of years for plastic bags to break down. As they do, tiny pieces can poison soil, lakes, rivers, and oceans. So, environmental experts urge people to reuse and recycle plastic bags.

Maryland artist Allita Irby does just that. It starts with the morning newspaper. Ms. Irby will read it later in the day. What is more important is getting that plastic bag the paper comes in.

The mixed media artist recognized its rich possibilities about three years ago.

"As I was taking the newspaper out. I felt the texture of these bags, they were soft. I just looked down and realized it takes three to make a braid. I'll just put a few staples in here just to keep it from unraveling."

Since then, Irby has been using plastic bags to create abstract lines in her art works.

#### Silkworms

Silkworms live for only two or three days after laying eggs. About 36,000 to 50,000 eggs are laid, and these are carefully stored at the silkworm farm until they are ready to hatch. The eggs hatch into caterpillars, which feed on mulberry leaves. Soon, the caterpillars are ready to spin their cocoons. Not all caterpillars can spin silk cocoons. Only the caterpillars of a silkworm moth known as 'Bombyx mari' can do such spinning. This caterpillar has special glands which secrete liquid silk through its lower lip. The liquid produced later hardens to form tine strands.

The caterpillar makes its cocoons using these strands. The threads on the outside of the cocoon are rough, while those inside are soft and smooth.

Some fully-spun cocoons are heated. This kills the pupa inside. The cocoons are then put into hot water to loosen the fine threads. Finally, these threads are reeled off the cocoons.

The length of unbroken thread produced by a single cocoon measures about one-and-a-half kilometers. Being twisted together several of these threads make single woven materials.

#### The importance of Reading

I personally think that reading is a very important activity in our life. Why do I say so? Firstly, by reading we can get a lot of knowledge about many things in the world such as Science, technology. Sports, arts, culture, etc written in either books, magazine, newspaper, etc.

Secondly, by reading we can get a lot of news and information about something happening in any parts of the world which can we see directly.

Another reason, reading can give us pleasure too. When we are tired, we read books, newspaper or magazine on the entertainment coloumn such as comedy, short story, quiz, etc. To make us relaxed.

The last, reading can also take us to other parts of the world. By reading a book about Irian Jaya we may feel we're really sitting in the jungles not at home in our rooms.

## The following song lyric is for questions no 34-37

In My Place, In My Place
Were lines that I couldn't change
I was lost, oh yeah
I was lost, I was lost
Crossed lines I shouldn't have crossed

I was lost, oh yeah

Yeah

How long must you wait for it?

Yeah

How long must you pay for it?

Yeah

How long must you wait for it?

Oh, for it

I was scared, I was scared

Tired and under prepared

But I'll wait for it

If you go, if you go

Leave me down here on my own

Then I'll wait for you (yeah)

Yeah

How long must you wait for it?

Yeah

How long must you pay for it?

Yeah

How long must you wait for it?

Oh, for it?

Singing please, please, please

Come back and sing to me

To me, me

Come on and sing it out

Now, now

Come on and sing it out

To me, me

Come back and sing

## Songs for A Dying Planet Song by: Joe Walsh

Is anyone out there?

Does anybody listen or care anymore?

We are living on a dying planet,

We're killing everything that's alive,

And anyone who tries to deny it

Wears a tie
And gets paid to lie

#### Giraffe

Giraffe is the highest animal in the world. Its height can reach 4.8 to 5.5 meters and its weight about 1360 pounds. Giraffe has a unique characteristic. They have a very long neck and two small horns on its head. Giraffes have big brown eyes and protected by thick and long eyebrows. Her body is covered with a unique pattern that is attached by brown spots all over their body. Just like camels, giraffes can survive without drinking for long time because giraffes can rely on the water contained in leaves they eat. Giraffes are very selective in choosing food. They always eat young leaves that grow in the tree tops. Their tongue shaped like a knife help them to cut branches which are very hard. Female giraffes can start pregnant at the age of five years, with a gestation period of 15 months. Commonly female giraffe bear one baby, but sometimes two babies at once. Giraffes bear its baby with a standing position. When the baby is about to be born, they just drop it to the ground from a 1.5 meter of height. #### SNAKES

Snakes are reptiles (cold-blooded creatures). They belong to the same group as lizards (the scaled group, Squamata) but from a sub-group of their own (Serpentes).

Snakes have two legs but a long time ago they had claws to help them slither along. Snakes are not slimy. They are covered in scales which are just bumps on the skin. Their skin is hard and glossy to reduce friction as the snake slithers along the ground.

Snakes often sun bathe on rocks in the warm weather. This is because snakes are cold-blooded; they need the sun's warmth to heat their bodies up.

Most snakes live in the country. Some types of snakes live in tress, some live in water, but most live on the ground in deserted rabbit burrows, in thick, long grass and in old logs.

A snake's diet usually consists of frogs, lizard, and mice and other snakes. The Anaconda can eat small crocodiles and even bears. Many snakes protect themselves with their fangs. Some snakes are protected by scaring their enemies away like the Cobra. The flying snakes glide away from danger. Their ribs spread apart and the skin stretches out. Its technique is just like the sugar gliders.
