**Read and write *T* for True and *F* for False.**

**The Chocolate Hills**

The Chocolate Hills are a fascinating group of hills on the island of Bohol in the Philippines. There are between 1,000 and 2,000 of these hills in a small area. They aren't very high—in fact, the highest one is only about 120 meters, but they're an unusual shape. Each hill is pointed and looks like a small triangle. There are no trees on the tops of them, only grass. The grass on the hills turns brown in the dry season. This is why they are called the chocolate hills. I'm sorry to say you won't find any chocolate there! Visitors aren't allowed to climb the hills, but they can walk up some steps and admire the view from the top.

Scientists can't agree on how the Chocolate Hills were formed. Some have said that different types of rock have come together to make them, but people still think the hills are mysterious.

12. The Chocolate Hills were formed in the forest of Bohol in the Philippines. _____

13. There are over 2,000 chocolate hills. _____

14. The hills are unusual because of their shape. _____

15. Grass grows on top of the hills, but trees don't. _____

16. They're called the Chocolate Hills because there's a lot of chocolate there. _____

17. Visitors can't climb the hills. _____

18. Scientists agree on how the Chocolate Hills were formed. _____

**Listen and choose the correct place. TR: 9**
