I tasted snakefruit for the first time when I was hanging out in Yogyakarta, Indonesia, cruising around and exploring the city. A local friend of mine happened to have a few snakefruit trees on her yard in Yogyakarta and brought a sack of them for us all to enjoy.

After feeling away the skin, I sunk my teeth into my very first snakefruit. Just like wood apple, I developed an instantaneous addiction. In the next 5 minutes I had eaten at least 25 pieces of snakefruit.

"Don't eat too much snakefruit, it will make you not use the toilet," my Indonesian friend warned me. After my heart sank a few inches I managed an "Oh. Okay," terrified of the doom I could face as I set aside my 26<sup>th</sup> fruit.

That night I could barely sleep, stressing about worst nightmare that seemed surly inevitable, constipation. I woke up, ate some breakfast, drank a coffee, and proceeded on with my chronic morning ritual. Fortunately my food blogger digestive system overcome the blocking powers of large quantities of snakefruit, constipation did not stand a chance!

Whether the myth is true or not, I still don't know. But one thing I do know, every time I eat snake fruit, even at a fruit buffet, I proceed with caution, knowing there could be consequence of eating too much of such a delicious thing.

The sweet potato (*ipomea batatas*) is a dicotyledonous plant that belongs to the morning glory family convolvulaceae. Its large, starchy, sweet tasting, tuberous roots are root a root vegetable. The origin and domestication of sweet potatoes is thought to be in either Central America or South America. In Central America, sweet potatoes were domesticated at least 5,000 years ago. In South America, Peruvian sweet potato remnants dating as far back as 8000 BC have been found.

The plant does not tolerate frost. It grows best at an average temperature of 24°C, abundant sunshine and warm rights. Annual rainfalls of 750-1,000 mm are considered most suitable, with a minimum of 500 mm in the growing season. The crop is sensitive to drought at the tuber initiation stage 50-60 days after planting, and it is not tolerant to water-logging, as it may cause tuber rots and reduce growth of storage roots if aeration is poor.

Besides simple starches, raw sweet potatoes are rich in complex carbohydrates, dietary fiber and beta-carotene, while having moderate contents of other micronutrients, including vitamin B and manganese. When cooked by basking, small variable changes in micronutrient density occur to include a higher content of vitamin C at 24% of the Daily Value per 100 g serving. The Center for Science in the Public Interest ranked the nutritional value of sweet potatoes as highest among several other foods.

In Indonesia, sweet potatoes are locally known as ubijalar and are frequently fried with batter and served as snacks with spicy condiments, along with other kinds of fritters such as fried bananas, tempe, tofu, breadfruits, or cassava.
