## FEELING BLUE

Harald "Blåtand" Gormsson was a King of Denmark and Norway who lived in the 10<sup>th</sup> century AD. **According to** legend, King Harald was always known \_\_\_\_\_ to bring together leaders to non-violently negotiate, share information and, crucially, communicate across boundaries.

A thousand years later, in the depths of the 1990's – Nokia, Ericsson and several other tech giants \_\_\_\_\_ short-range wireless communication models to transfer information from phones to PCs and back without cords and cables.

At a meeting in Sweden some designers and engineers got together to talk about this concept. \_\_\_\_\_ of the developers wanted a better name for the project than MC-Link or Biz-RF. So in his presentation he gave the new model a codename \_\_\_\_\_ this ancient communication king. A fun, silly codename and literal translation of Blåtand: Bluetooth.

The name Bluetooth was meant to be temporary \_\_\_\_\_ something official came together. \_\_\_\_\_, when the product was ready for market, the name Bluetooth caught on like wildfire. It's the name we \_\_\_\_\_ use for the wireless technology which connects keyboards, mice, cell phones, and other devices the world over.

Best \_\_\_\_\_ all, though, the Bluetooth icon on your desktop is his, too. The symbol we associate with easy, painless information sharing across hundreds of languages and file types is the result of combining the Old Norse runic symbols for 'H' and 'B'.
