

Human Impact

Here are four pieces of news. Make a cross in the box that contains the best “Heading” for each of the news.

- a) Mercury in Peruvian waters
- b) Human impact in jungle trees
- c) Hunting of birds to export

The Andian cock-of-the-rocks (*Rupicola peruviana*) is disappearing from its natural habitat, the Peruvian Amazon Rainforest.

The animal has been smuggled from Peru to international areas in terrible ways.

Authorities are investigating and capturing the people involved.

- a) Pollution kills turtles
- b) Air pollution impacts kids
- c) Beautiful jellyfishes

Turtles live in the sea and part of their diet is jellyfish.

Lately, scientists found turtles with plastic in their stomach because they eat it by mistake as in the water plastic looks like jellyfish.

Scientists from all over the world raise consciousness about the human impact in the seas.

- a) Air in Lurin and angry humans
- b) Mercury in waters of Lurin
- c) Deforestation is a problem in Lurin

Hello, everyone. This is Camila and Kaori reporting from Lurin.

Here, we can observe a serious problem. People are cutting the trees and destroying the habitat of animals.

The consequence of this problem is that animals are going under extinction.

Authorities need to come and do something to stop it.

- a) Air in Chilca and angry birds
- b) Fish die in Chilca waters
- c) Hunting in Chilca make birds migrate

Chilca is the home for the factory FUCSA. They produce a lot of smoke when they work metals to the mining industry.

In that area, neighbors do not see or listen to birds.

Biologists studying the area say the smoke produced by the factory makes birds migrate to other areas with cleaner air.
