

Complete the Square

Drag the correct answer from below to underneath the question.

For example: $x^2 + 4x + 11$
 $= (x + 2)^2 + 7$

$x^2 + 4x + 6$	$x^2 - 4x + 1$	$x^2 - 6x - 2$
$x^2 + 2x + 9$	$x^2 - 8x + 6$	$x^2 - 4x + 5$
$x^2 + 6x + 2$	$x^2 - 2x + 20$	$x^2 - 2x - 9$
$x^2 + 10x + 16$	$x^2 - 2x + 7$	$x^2 + 4x - 10$

$(x - 2)^2 - 3$	$(x - 2)^2 + 1$	$(x - 1)^2 - 10$
$(x + 2)^2 - 14$	$(x - 1)^2 + 6$	$(x + 3)^2 - 7$
$(x + 1)^2 + 8$	$(x + 2)^2 + 2$	$(x + 5)^2 - 9$
$(x - 1)^2 + 19$	$(x - 4)^2 - 10$	$(x - 3)^2 - 11$
