| sight | protective parts |
| take in | eyeball |

Our eyes are sense organs that _____ light and give us _____. The _____ is the main part of the eye. There are other _____ around it that keep it safe.

2. Complete the definitions of the parts of the eye

- The _____ are short curved hairs that protect the eye from sweat and dust.
- The _____ is the black circle in the middle of the iris. Light enters through this part.
- The _____ is the coloured circle at the front of the eye. It can be green, brown or blue.
- The _____ is a layer of cells inside the eye. It transforms the light that enters the eye into nerve signals.
- The _____ spread the moisture from the tears over the surface of the eye. They protect the eye from the excess of light.
- The _____ produce tears and these keep the eye clean and moist.
- The _____ are strips of hair that protect the eye from dust and sweat.
