

Writing

The many fields of science can make for a wide variety of paper topics. Take a look at some ideas that can be used to kick-start your imagination. Choose one of the suggested topics or other ideas that you may come up with and write about it.

1 Famous Scientists

Imagine you can travel back in time to have a conversation with a famous scientist. Explain the effects his or her scientific contributions have had on life in the present day. What would this person's reaction be, and what kind of questions would he or she ask?

2 The Distant Future

Try to envision the planet a thousand years from now. Will life as we know it still exist, and how did we manage to make it this far if so? If the planet cannot sustain the human race, what happened to make it so? What kinds of animals still live, and have new species been discovered along the way? Are there other planets capable of supporting life?
