

Example:

$$12 \div 3 = \frac{12 \times 3}{2} = 18$$

$$7 \div 6 = \frac{7 \times 6}{2} = 21$$

$$6 \div 4 = \frac{6 \times 4}{2} = 12$$

1. $6 \div 5 = \square$

6. $\square \div 5 = 20$

2. $\square \div 9 = 36$

7. $24 \div 2 = \square$

3. $10 \div \square = 50$

8. $9 \div \square = 27$

4. $18 \div 3 = \square$

9. $15 \div 4 = \square$

5. $20 \div \square = 50$

10. $\square \div 8 = 32$
