

## .73 Population Dynamics: Population Characteristics

The name:

Connect the term with the appropriate definition:

death rate

environmental factor  
that depends on the  
population density

logistic growth

environmental factor  
that affects populations  
regardless of their  
density

density-dependent  
factor

the movement of  
individuals into a  
population

density-independent  
factor

the number of deaths in  
a given time period

immigration

occurs when a  
population grows slowly  
and then stops,  
following a period of  
exponential growth

emigration

the movement of  
individuals away from a  
population
