

Nervous system

Control and coordinate all the functions of our body

BRAIN

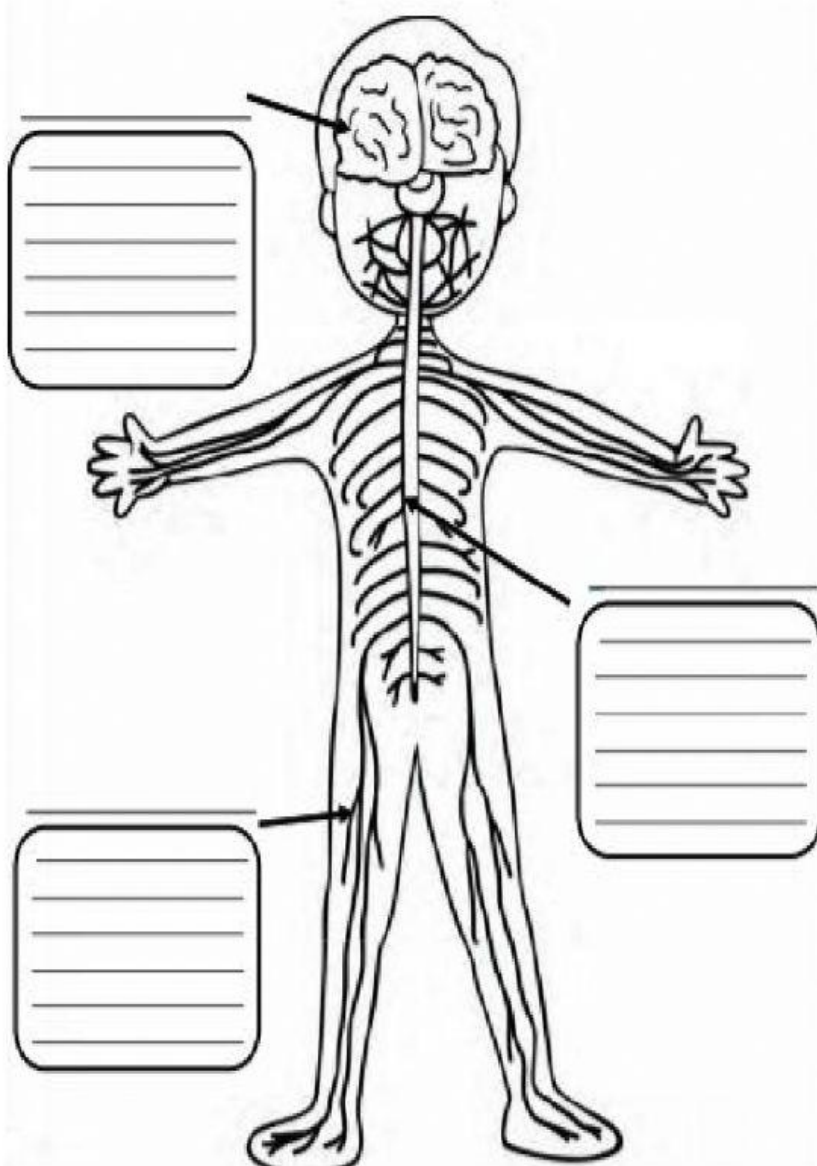

SPINAL CORD

NERVES

Nervous system

- Central nervous system: it comprises the brain and spinal cord.
- Peripheral Nervous system: connect the central nervous system with every other part of the body.

The function of the brain is to figure out the messages sent by the nerves and tell the body what to do

The function of the nerves is to send and receive signals to the brain

The function of the spinal cord is to carry messages to and from the brain
