

Simplifying fractions (proper fractions only)

Grade 3 Fractions Worksheet

Simplify the fractions.

1. $\frac{2}{4} =$ _____

2. $\frac{8}{12} =$ _____

3. $\frac{20}{50} =$ _____

4. $\frac{12}{20} =$ _____

5. $\frac{10}{15} =$ _____

6. $\frac{2}{8} =$ _____

7. $\frac{2}{16} =$ _____

8. $\frac{4}{12} =$ _____

9. $\frac{5}{50} =$ _____

10. $\frac{20}{32} =$ _____

11. $\frac{9}{18} =$ _____

12. $\frac{4}{16} =$ _____

13. $\frac{20}{25} =$ _____

14. $\frac{3}{6} =$ _____

15. $\frac{8}{16} =$ _____

16. $\frac{6}{15} =$ _____

17. $\frac{35}{40} =$ _____

18. $\frac{3}{9} =$ _____

19. $\frac{40}{50} =$ _____

20. $\frac{5}{30} =$ _____

21. $\frac{4}{8} =$ _____

To find the simple fraction you can

1. Find the GCF, then divide the numerator and denominator by the number.

2. See if the numerator can be divided into the denominator without leaving a remainder. If that can happen, use the numerator to divide the denominator and the numerator.
