## Respiration

## Diffusion of Respiratory Gases

The following table shows the respective quantities of oxygen and carbon dioxide in blood entering and leaving a muscle at rest.

Gas	Blood entering the muscle	Blood leaving the muscle				
Oxygen	20 mL	15mL				
Carbon dioxide	49 mL	53mL				

1-	Compare	the	quantity	of	oxygen	and	that	of	carbon	dioxide	in	the	blood
	entering a												

	Indicate	the	direction	of	diffusion	of	respiratory	gases	at	the	level	of	the
	muscle												

3- Identify the color of blood entering the muscle and that of a blood leaving it.

4- Indicate in what form oxygen and carbon dioxide are transported by blood.
