

Desarrollo de Cuerpos Geométricos

El desarrollo plano de un cuerpo es una manera de representar un cuerpo desplegado. Está compuesto por todas las figuras que forman las caras de ese cuerpo.

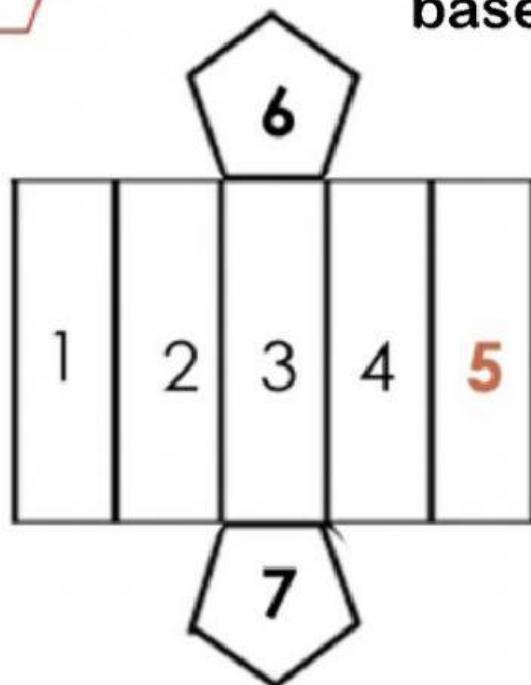

Prisma (hexagonal)

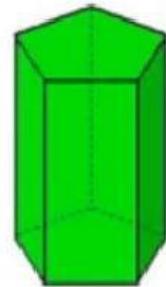

Pentágono (5 lados)

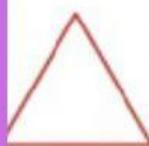

5 paredes+1 piso+1 techo= 7 caras
bases

**Prisma
Pentagonal**

¿Qué pasa cuando solo tiene piso y paredes?

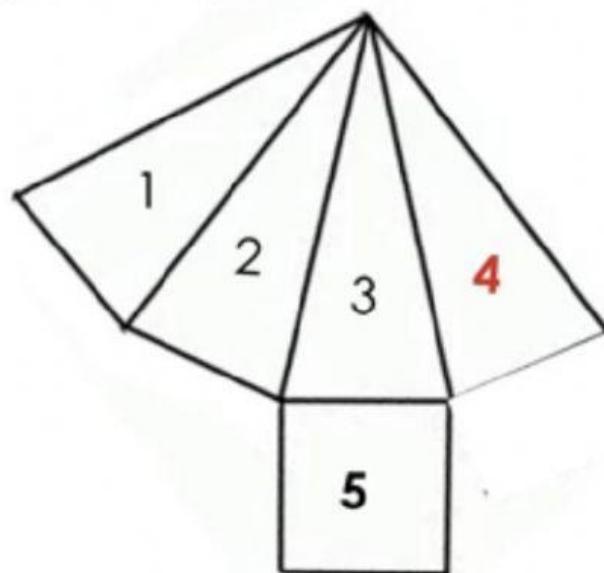

Triángulo
(3 lados)

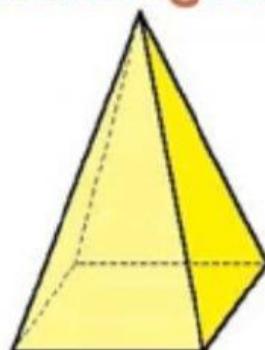

Cuadrado
(4 lados)

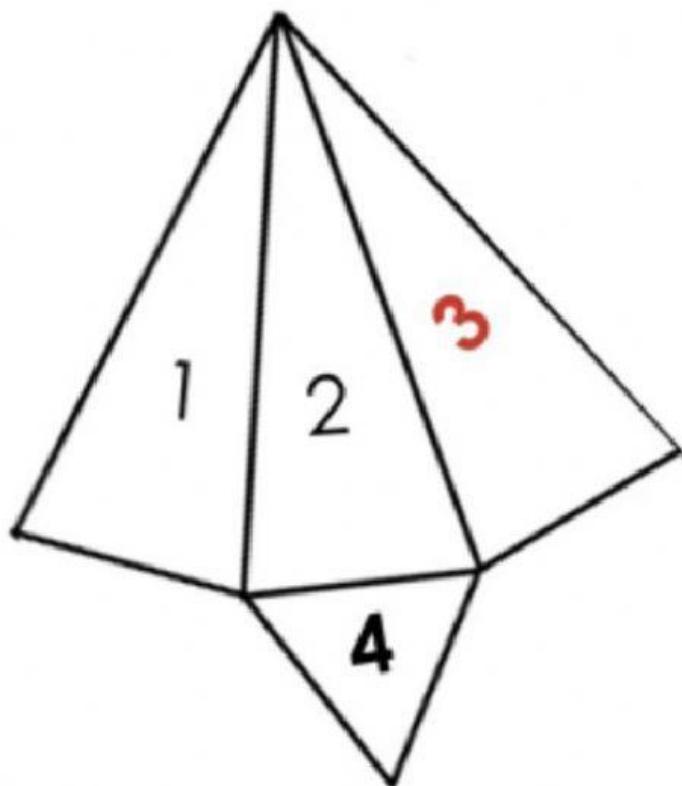

4 paredes +1 piso= 5 caras

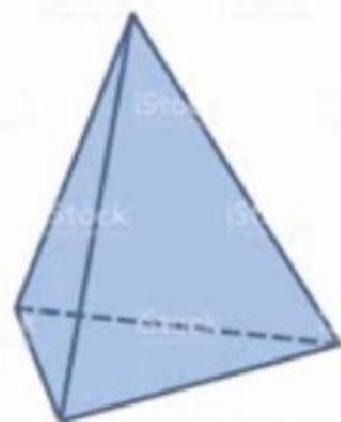

**Pirámide
cuadrangular**

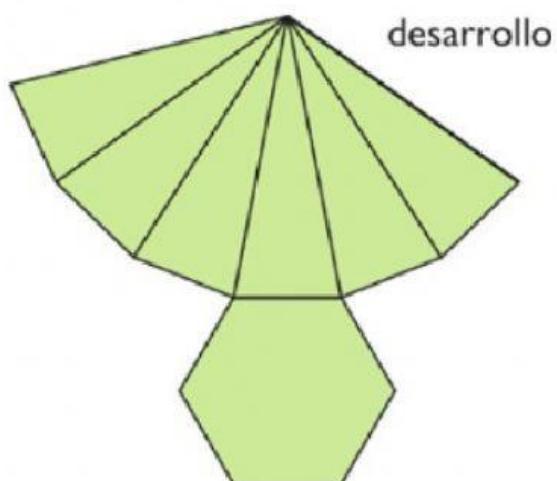

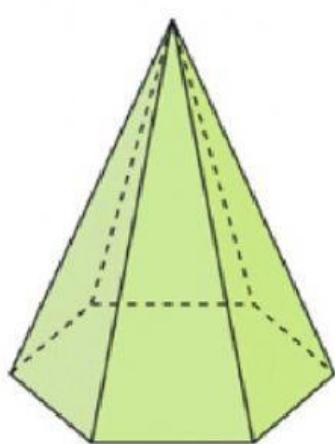

3 paredes + 1 piso = 4 caras

Pirámide
triangular

Piramide (hexagonal)

Elige el cuerpo geométrico que corresponde al desarrollo mostrado
