

NAME : _____

CLASS : _____

=====

Social media is any digital tool that allows users to quickly create and share content with the public. It is designed to allow people to share content quickly, efficiently, and in real-time. Social media encompasses a wide range of websites and apps. While many people access social media through smartphone apps, this communication tool started with computers, and social media can refer to an internet communication tool that allows users to broadly share content and engage with the public. **A**

Anyone with internet access can sign up for a social media account. Most social media sites start with a user creating a profile, usually by providing a name and an email address. Once a profile has been created, users can create and share content. For instance, an Instagram user with a new account can take a picture and share it on their profile with a caption. They can use that account to share whatever content they choose to, and the content they share reaches anyone who visits their page or profile. **B**

Social media often uses "feed" that allow users to scroll through content. Social media companies use algorithms, based on a user's profile data, to determine the content that appears and the order that it appears in. The feed will include content from "followed" users, as well as from entities that pay to promote their content. **C**

There are many different types of social media, and many services could fit into multiple categories. Social networks specialize in connecting and exchanging thoughts, ideas, and content with other users—often with users who share tastes and interests for example like Facebook, Twitter, and LinkedIn. Media networks specialize in distributing content like photographs and videos. Instagram and YouTube are examples of this. While Discussion networks like Reddit are the ideal outlets for posts that can spark in-depth discussion among users. **D**
