**Directions:** Read the passage below. Then answer questions about errors in the passage.

The atom is the basic building block of matter. One interesting aspect of the atom is its spatial composition. 1) Surprisingly, it is largely built from empty 2) space its nucleus made of protons and neutrons, 3) makes up only about a billionth of the atom itself. Another surprising aspect of the atom is its structure. 4) Because most of us maintain a mental model of the atom's nucleus being orbited by discrete electrons, the 5) reality is way different than that traditional depiction. Scientists now prefer to describe the movement of electrons around the nucleus as a so-called 6) "wave-pattern cloud. In addition, models predicting the placement of electrons *within* the cloud 7) is described as one probability among many, 8) instead than depicting planet-like electrons orbiting a sun-like nucleus.
