

Space exploration

Watch the video and mark the statements as True or False

<https://www.youtube.com/watch?v=unxroTyI16A&feature=share>

1. There are some companies which are working on transporting cargo and people into space
2. Radiation from the Sun is one of the dangers which astronauts should be protected from
3. Cryogenic system has been developed to keep astronauts frozen while travelling into deep space
4. Bombarding the surface of asteroids and comets is necessary to protect the Earth from colliding
5. Mineral resources mined from asteroids can be used as fuel for spaceships
6. Replacing mirrors in the telescopes with a special film is more convenient. But more expensive
7. Providing astronauts with food is the most challenging problem
