The Semaphore Simplified

Za pomoci instruktážní příručky pro vojáky první světové války přiřaď písmena A, B, C a D ke správným signálům.

angle – úhel; ***degree*** – stupeň; ***perpendicularly*** – kolmo; ***commenced*** – zahájeno, ***further*** – dále; ***straight*** – rovně; ***added*** – přidán; ***thus*** – tím pádem; ***accordance*** – soulad; ***amount*** – množství; ***midway*** – uprostřed; ***prolonged*** – prodlouženo, ***upwards*** – nahoru; ***placing*** – umístění

To form the letter **A** the right arm is placed at the first angle of 45 degrees on the right hand side of the body, the angle being that formed between an imaginary line drawn perpendicularly through the centre of the body and a straight line down the arm.

This is the first part of the four right angles used, and is commenced at the bottom, on the right side of the body.

To form letter **B** a further angle, 45 degrees, is added to this first one, thus making a right angle with the vertical line down the centre of the body, on the right-hand side.

The letter **C** is made in accordance with the above, that is to say, by adding 45 degrees on the amount of the circle already used, this will bring the arm to a position midway between that at right angles to the body as in letter B and the continuation of the vertical line prolonged upwards through the centre of the body.

The letter **D** is made by placing the arm in continuation of the vertical line through the body, in other words, straight above the head.

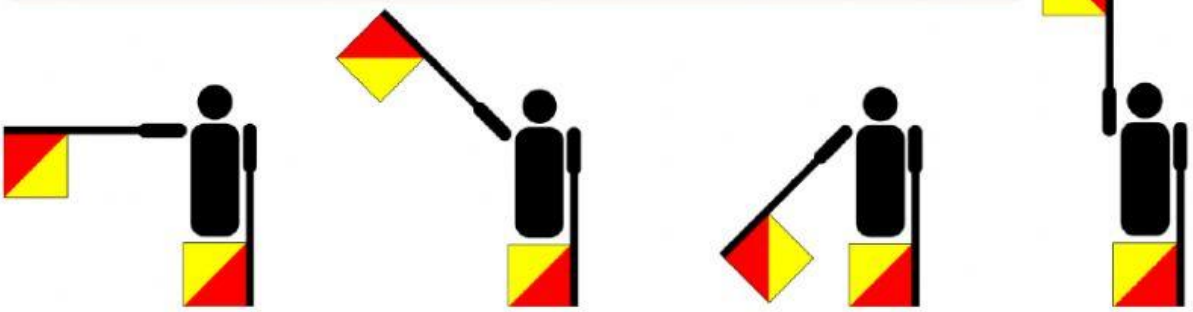

Up to this all the letters have been made with the right arm alone, and half of the four right angles have been expended.

A

B

C

D
