c. It's in the cupboard.

7. I really like that song!

a. It starts at 2:00 pm

b. Well done.

c. Me too.

- Read the following text and choose the correct answer.

Occasionally during the night one can see meteors. They resemble streaks of light and for this reason are called falling stars. As meteors travel through space they sometimes fall into the Earth's gravitational pull and the friction between these rocks and the atmosphere causes most of them to burn up before they reach the surface of the Earth. At times, however, very big pieces of meteors fall to Earth and although they are burned up to a large extent, some pieces do reach the surface. These are then called meteorites. The largest meteorite to have been founded is the Hoba meteorite. It was found in Namibia and weighs 60 tons.

8. Meteors that hit the Earth _____.

- A) are known as meteorites.
- B) are called falling stars.
- C) are found in the Hoba.
- D) will land in Namibia.
- E) burn up due to friction.

9. The Earth's atmosphere _____.

- A) has many meteors in it but we cannot see them.
- B) prevents most meteors from falling into the Earth's gravitational pull.
- C) and the friction it causes prevent many meteors from becoming meteorites.
- D) attracts the large falling stars to the Earth.
- E) is so hot that it burns up rocks easily.

10. Meteors are _____.

- A) huge stars that travel in space.
- B) very large pieces of stone.
- C) able to easily land on Earth.
- D) always in their travel in our atmosphere.
- E) usually present in Namibia.

- Complete the text. Choose the correct option.
