

TRANSNATIONAL TEAMS FOR THE FINAL PRODUCT

MAMMALS

(Fourth Team : Cinzia CATALANO – Ümmü Gülsüm BAYRAK)

The word “mammal” comes from latin word and it means breast.Mammal females are the only animals that suckle their young.Mammals take care of their babies untill they are independent.Mammals are vertebrates and they are warm-blooded.They have a four-chambered heart.Their skin is covered with hair or fur.Mammals have four limbs so they can move in different directions.All mammals, even the ones in water breathe oxygen.Mammals can be both carnivores and herbivores.Mammals can live almost in every habitat.There are 6495 mammal species in the world. The Antartic Blue Whale is the biggest mammal animal on the planet.Gorillas,rhinos,sea turtles,kolas,blue whales, amur leopards are some mammals in danger of extinction.We should protect and respect all mammals.

- 1- Mammals never leave their youngs.
- 2- All mammals have fur.
- 3- The biggest mammal is blue whale.
