

# Robots help children

Read the article and choose the most suitable word for the missing spaces

There are special robots which help children with autism. \_\_\_1\_\_\_ is a **disorder** which makes it very difficult for a person to communicate with other people. Also, a person with autism does not understand many social situations.

People with autism need **structure** in life and they do not understand quick changes. \_\_\_2\_\_\_ can make the lives of these people easier. Children between 3 and 18 years learn to solve **conflicts** through role play. Role play means that they play a role of somebody else in some \_\_\_3\_\_\_. This way children learn how to behave in real life.

More than 1,200 children used the robots since 2015 and the result is great. The parents are happy because most children can communicate better. They even \_\_\_4\_\_\_ other people simple questions which is something what they could not do in the past.

Difficult words:

**disorder** (a problem which affects someone's mind or body), **structure** (the way that things work or how they usually are), **conflict** (a big problem between people).
