- A Hortobágy
- B Kiskunság
- C Maros-Körös köze
- D Nagykunság
- E Hajdúság
- F Jászság
- G Nyírség
- E Mezőföld
- F Dráva-mellék

4. Write the letters corresponding to the regions from Exercise 3 under the names of the type of surface that cover these areas.

Fertile mud:

Sand:

Loess:

5. Write the letters corresponding to the sentences beside their correct region.

- A The winds built 50–60 m high loess walls.
- B The winds blew the sand from the sediment of the rivers, and built 10–15 m high dunes.
- C There is a wide band next to the rivers, which is made of fertile mud from the rivers.
- D The dunes wander with the changing direction of the winds.
- E Further from the rivers, thick grass was able to get a hold of the fine dust carried by the winds.
- F During the constant floods, thick layers of sediments were laid down and formed a surface as flat as a table.
- G The fine dust laid down by the wind mixed with the sediments of the rivers and developed into a very fertile soil.
- H The direction of dunes and lakes mark the direction of the winds that blow from the NW.

Kiskunság, Nyírség: _____

Nagykunság, Hortobágy, Jászság and Dráva-mellék: _____

Maros-Körös köze, Mezőföld, Hajdúság: _____
