

Ecuaciones aditivas

Resuelve las siguientes ecuaciones aditivas

a) $1\frac{2}{3} + x = 3\frac{2}{5}$

$$\frac{\square}{\square} + x = \frac{\square}{\square}$$

$$\frac{\square}{\square} + x = \frac{\square}{\square}$$

$$x = \frac{\square}{\square}$$

$$x = \frac{\square}{\square}$$

$$x = \frac{\square}{\square}$$

c) $x + 1\frac{3}{11} = 4\frac{1}{2}$

$$x + \frac{\square}{\square} = \frac{\square}{\square}$$

$$x + \frac{\square}{\square} = \frac{\square}{\square}$$

$$x = \frac{\square}{\square}$$

$$x = \frac{\square}{\square}$$

$$x = \frac{\square}{\square}$$

b) $x - 3\frac{1}{5} = 1\frac{3}{4}$

$$x - \frac{\square}{\square} = \frac{\square}{\square}$$

$$x - \frac{\square}{\square} = \frac{\square}{\square}$$

$$x = \frac{\square}{\square}$$

$$x = \frac{\square}{\square}$$

$$x = \frac{\square}{\square}$$

d) $5\frac{1}{3} + x = 8\frac{1}{5}$

$$\frac{\square}{\square} + x = \frac{\square}{\square}$$

$$\frac{\square}{\square} + x = \frac{\square}{\square}$$

$$x = \frac{\square}{\square}$$

$$x = \frac{\square}{\square}$$

$$x = \frac{\square}{\square}$$
