9. She slept all morning because she _____ (go) to bed late.
10. They were hungry because they _____ (not/have) anything to eat.

Read the text attentively.

WHERE WILL TECHNOLOGY TAKE US?

When I was young, I remember watching *Star Trek the Next Generation* and thinking **their** tricorders were so cool, cordless devices that they could just press on like a walkie-talkie and speak without having to do anything else to communicate with their ship. When I grew up a cell phone was the size of a brick and computing power wasn't even near what **we** have in our cell phones today! Though we are far from warp-speed and transporters, much of what we saw on *Star Trek* is becoming a reality. Wireless communication has transformed the technological landscape. Cell technology allows us access to the Internet, email, text messaging, digital photos and video, social networking, Twitter and much more. Our computers are now our window to the world allowing us to read the news, keep in touch with old friends, buy and download music, watch movies and television, read books and newspapers via digital copy.

Soon the world will change in a much broader way than we would ever expect **it** to. With new technologies the frontier of the future is wide open.

- **Nanobot Technology** – Nanobots will help in many tasks but the most important will be in the medical field. They will be able to replace brain neuron connections, kill off cancer cells, seek out and destroy bacteria and viruses, and even cure certain types of genetic diseases.

- **Smart Vehicles** – With GPS and scanning devices like laser imaging technology and object recognition software, smart cars will soon be driving themselves.

Cars will avoid obstacles, react appropriately to dangerous road conditions, and find few routes if there are accidents along the way.

- **Personal Communications** – Soon you will be able to watch a movie, listen to music, contact friends, surf the net, take pictures, and take a call, all without the use of a cellular phone or device. With new plasma screen technology a pair of glasses can be turned into a digital screen and your finger tip tabs a mouse. This will change the way we communicate and are entertained forever.

G. Decide whether the following statements are TRUE or FALSE. [6 x 5 = 30 pts]

1. Nowadays our means of transport are similar to the ones in *Star Trek*.
2. Wireless communication has revolutionized the world.
3. Technology has reached a stage where it won't develop much more.
4. Nanobots will deliver great medical breakthroughs.
5. Smart cars will stop using GPS technology.
6. A simple pair of glasses will replace your cell phone.

I. Find in the FIRST PARAGRAPH of the text words that mean the same as the following. [4 x 5 = 20 pts]

- | | |
|----------------|----------------|
| 1. sensational | 3. permitting |
| 2. changed | 4. communicate |

J. What do the following words refer to in the text? [3 x 5 = 15 pts]

- | | | |
|----------|-------|-------|
| 1. their | 2. we | 3. it |
|----------|-------|-------|
