

Directions - Drag and drop the words in the correct blank.

Lesson 3

The outer Surface of Earth is a layer of rock called the _____.
The crust covers all of Earth.

A _____ is a natural land feature on Earth's Surface. Landform can be different sizes and shapes. Example: Mountain

Rocks in Earth's crust are slowly broken into smaller pieces in a process called _____.

- _____ weathering
- _____ weathering

chemicals cause rocks to change into different materials and break down.

In physical weathering, rocks are broken into smaller pieces of the same kind of rock.

Gravity, wind, water, and ice can all move bits of weathered rock. The process of carrying away weathered bits of rocks is called _____.
Examples: canyons, glaciers

The forces that carry away bits of weathered rock during erosion must drop them somewhere else. This laying down of pieces of rock is called _____.
Examples: Rivers deposit - delta, desert
