

## READING PASSAGE 1

You should spend about 20 minutes on **Questions 1–13**, which are based on Reading Passage 1 below.

### The Vikings' Wayfaring Ways

Perhaps best known as fierce warriors, the Vikings were also the most far-ranging of peoples. In fact, the term *Viking*, in Old Norse, means “to go on an expedition.” From the late 700s until the eleventh century, Viking explorers journeyed from their native Norway, Denmark, and Sweden to many distant lands. They traveled<sup>1</sup> as far west as Newfoundland in present-day Canada, and as far east as Baghdad.

Those from Norway sailed west to the British Isles, and eventually across the Atlantic Ocean. During their first expedition, in 793, a force of Viking warriors sacked the famed abbey at Lindisfarne, on England’s northeast coast. In the 800s, groups of raiders went on to occupy the Shetland Islands, north of the British Isles and west of Norway, and the Orkney Islands off northern Scotland.

By 870, the Vikings were settling Iceland. In 980, an Icelandic assembly found a man named Eric “the Red” Ericson guilty of murder and sent him into exile. Eric the Red responded by sailing to a large island to the west, which he called “Greenland.” An Icelandic saga mentions that people would be attracted to go to Greenland if it had a favorable<sup>2</sup> name. Around 998, Eric the Red’s son, Leif “the Lucky” Ericson, and a small Viking fleet sailed west to North America. There they established the first European settlement in the New World, called “Vinland.”

Vikings from Denmark, meanwhile, ravaged large swaths of England and France. In 866, a Viking “Great Army” landed in England, occupying much of the country’s north and east. They forced the English king to acknowledge their control of much of England under the so-called Danelaw. To the west, they conquered coastal portions of Ireland, and in 841 founded Dublin, today a major Irish city, but originally a Viking fort. The Vikings remained a major power in Ireland until the early eleventh century.

To the south, the Vikings conquered France, moving swiftly up rivers in long boats, powered by oar and sail. From 845 to 886, they surged up the Seine to attack Paris three times. To stop the raids, French King Charles III the Simple in 911 offered the Viking chief Rollo territories in northwest France, called Normandy, after the Normans or “Northmen.” There they set up a powerful kingdom and, in 1066, under William, Duke of Normandy, defeated King Harold at the battle of Hastings in England.

Farther south, in 844, the Vikings had raided Portugal and Spain, then largely controlled by Arab Moors. A fleet of 100 Viking ships seized Lisbon and boldly

<sup>1</sup>British: travelled

<sup>2</sup>British: favourable

sailed up the Guadalquivir River to occupy Seville. However, the Moors dealt them a rare defeat. The Moors catapulted flaming projectiles onto the Viking vessels, forcing a retreat.

Still other Vikings sailed much farther, to raid Morocco, then to the eastern Mediterranean and beyond. Many of these Vikings enlisted with the military forces of the Byzantine Empire, the Greek-speaking successors to the Roman Empire. Vikings made up the Byzantine Emperor's elite Varangian Guard. In 902, hundreds of Varangians served as marines during a Byzantine naval assault on the island of Crete. Varangians battled Arab forces in Syria in 955, and even fought in Jerusalem. So many men left Scandinavia for the Byzantine Empire that, to stem the outflow, Sweden passed a law denying inherited property to anyone serving under the Byzantines.

The Vikings of Sweden, meanwhile, were moving out of Scandinavia to the east and south. They journeyed through the Baltic Sea, then built inland trading posts in Germany and Poland. In time, they struck out across Central and Eastern Europe, down the Vistula River in Poland, and the Dnieper, Volga, and Don Rivers in Russia. Their vessel of choice was the "knar," a cargo ship with a deep draft and wide hull. Viking merchants on horseback penetrated far into the Asian heartland, trading with towns on the Caspian and Black seas.

The most significant settlements were in Russia and Ukraine. In 862, Vikings settled in the town of Novgorod, in northwestern Russia. It became the capital of a country called Rus, after the Finnish name for the Swedes. Rus came from the word *Rutosi*, meaning "rowers." Rus formed the foundation of Russia, as the Russian and Viking leaders of Rus intermarried, converted to Christianity, and steadily expanded their territory. And after lucrative trade relations were established with the Byzantines and with Muslim lands, the Rus moved their capital southward to Kiev, later the capital of Ukraine.

Another important Viking market town was Bulgar, on the Volga River. There, merchants peddled honey, wax, amber, and steel swords. The Viking's most common commodity may have been skins: they dealt in horse, beaver, rabbit, mink, ermine, and sable skins. They also traded hazelnuts, fish, cattle, and falcons. Another commodity was slaves, many of them Slavs from Eastern Europe. The merchants eagerly exchanged their goods for Arab silver coins. In Sweden, archeologists<sup>1</sup> have excavated about 100,000 such coins, minted in such distant cities as Cairo and Tashkent.

Like their Danish and Norwegian relatives, the Swedish Vikings traveled to the most exotic realms. They took part in the Silk Road trade with India and China. Archeological evidence shows that Viking traders even traveled by camel caravan to Baghdad.

Given the wide-ranging travel of the Vikings, it is fitting the Anglo-Saxons gave them the nickname "Færgenga"—"Far Going."

**Questions 1–5**

Answer the questions below.

Choose **ONE NUMBER ONLY** from the text for each answer.

Write your answers on lines 1–5 on your answer sheet.

- 1 When did Viking warriors raid an abbey on the coast of England?
- 2 When was Eric the Red convicted of a crime?
- 3 When did Vikings establish a fort in Ireland?
- 4 When was a Viking chief granted lands by a king of France?
- 5 When did Viking warriors defeat an English king?

**Questions 6–13**

Complete the summary using the list of words, **A–O**, below. Write the correct letter, **A–O**, on lines 6–13 on your answer sheet.

The people known as Vikings were given this name because they were 6 \_\_\_\_\_ . Groups of Vikings from Norway traveled west to Britain, Iceland, and beyond. They were the first Europeans who 7 \_\_\_\_\_ North America. Groups from Denmark 8 \_\_\_\_\_ large areas of England and France. Other groups of Vikings raided areas of Portugal and Spain. The people of Seville, Spain, drove the Vikings away by throwing 9 \_\_\_\_\_ at them. Large numbers of Vikings left Scandinavia for the Byzantine Empire, and many of these joined the Byzantine military. At one point, they took part in 10 \_\_\_\_\_ on the Greek island of Crete. Groups of Swedish Vikings crossed the Baltic Sea to explore the lands beyond. They traveled down Russian rivers, then journeyed deep into Asia by 11 \_\_\_\_\_ . After settling in northwest Russia, they expanded their territories toward the south. Kiev, Ukraine, eventually became the Vikings' territorial 12 \_\_\_\_\_ . The Vikings also had an important 13 \_\_\_\_\_ in the town of Bulgar on the Volga River.

## READING PASSAGE 2

You should spend about 20 minutes on **Questions 14–26**, which are based on *Reading Passage 2* below.

### Dyslexia

Dyslexia, also referred to as “specific reading disability,” predominantly affects a person’s ability to read and write. Dyslexics have difficulty connecting visual symbols (i.e., letters) with their corresponding sounds. Many people who suffer from dyslexia also have trouble with enunciation, organization,<sup>1</sup> and short-term memory. Dyslexia is the most common learning disability in children. It is not related to intellectual ability, vision, or access to education. Approximately 5-10 percent of school-age children in North America suffer from the condition, with each case varying in severity. Children are generally diagnosed with dyslexia during the elementary school years when they are learning how to read and spell.

Determining the definite cause of dyslexia is a difficult task since studies of the morphology of the brain are generally conducted in an autopsy. One hypothesis suggests that dyslexic children suffer from “strabismus,” the tendency of the eyes to focus on two different points. When reading, for example, one eye focuses on the beginning of the word and the other focuses on the end. This theory could explain why dyslexics have difficulty reading. Many dyslexic children read letters and words backwards, often mistaking a *b* for a *d* or reading *was* instead of *saw*. These reversals are normal for children under the age of six, but indicate a problem if they persist beyond the early elementary grades. Neurological research points to tiny flaws in the dyslexic brain called ectopias and microgyria. These flaws alter the structure of the cortex, the area of the brain that is responsible for connecting visual and audio processing. Genetic research, often in the form of twins studies, shows that dyslexia may be passed on in families.

Though most children are not diagnosed with dyslexia until they enter the school system, there are some early signs of the disability. Toddlers who talk much later than average, have difficulty learning new words, or do not understand the concept of rhyming may develop other dyslexic symptoms. As children begin school, teachers are trained to look for warning signs, such as an inability to recognize<sup>2</sup> letters or spaces between words on a page or difficulty following instructions given with more than one command at a time. Properly screening children for dyslexia is important since other factors can limit reading abilities, including vision or hearing impairment, anxiety, or other neurological problems.

<sup>1</sup>British: *organisation*

<sup>2</sup>British: *recognise*

Dyslexia is a type of learning disorder that can often be compensated for with therapy and motivational techniques. Phonological training, which involves identifying and separating sound patterns, is the most common form of therapy used in the school system. Depending on the severity of the disorder, dyslexic children are pulled from regular classroom activities in order to work one-on-one with a language specialist. Studies have shown that activity in the right temporoparietal cortex tends to increase after sufficient phonological training. Improvements in visual focus can sometimes be achieved when students are given an eye patch to wear while they learn to read. Encouraging children to use many senses while reading also has proven benefits. Some teachers find that having students listen to a book on tape before reading the text can help with information processing as well.

Though it is properly classified as a learning disability, dyslexia is commonly mistaken for a behavioral<sup>1</sup> disorder. Dyslexic children often exhibit behavior that seems abnormal but is caused by frustration at their own inability to perform at the same level as their peers. Some studies show that attention deficit disorder co-occurs with dyslexia in up to 50 percent of cases. In general, behavioral problems decline as dyslexic students are diagnosed and begin to receive treatment.

Other learning disabilities are neurologically linked to dyslexia, including dyscalculia, dysgraphia, and dyspraxia. People who suffer from dyscalculia can usually perform difficult mathematical tasks, but have trouble with formulas or basic addition and subtraction. Dysgraphia prevents people from writing in an organized manner. Dyspraxia impedes the performance of routine tasks that involve balance and fine motor skills.

The earlier children are diagnosed with dyslexia, the more likely they are to overcome their disabilities and progress to adult reading levels. Many studies show that children who are diagnosed after grade three have a much lower chance of eliminating the symptoms of dyslexia. Some dyslexics, especially those who are not diagnosed as children, naturally develop their own coping mechanisms such as an increased visual memory. In some instances, dyslexics develop keen spatial and visual abilities that prepare them for very specialized<sup>2</sup> careers.

<sup>2</sup>British: *specialised*

**Questions 14–20**

Do the following statements agree with the information in the reading passage? On lines 14–20 on your answer sheet write:

<b>YES</b>	if the statement agrees with the information
<b>NO</b>	if the statement contradicts the information
<b>NOT GIVEN</b>	if there is no information on this in the passage

- 14 Dyslexia is a disorder related to intelligence.
- 15 Dyslexia is usually diagnosed during a child's first years of school.
- 16 People with dyslexia often read in reverse.
- 17 There is a tendency for dyslexia between twins.
- 18 Scientists are looking for a drug treatment for dyslexia.
- 19 Dyslexia in children is often accompanied by behavioral problems.
- 20 People with dysgraphia have difficulty with math.

**Questions 21–23**

Which of the following are signs of dyslexia mentioned in the passage? Choose THREE answers from the list below and write the correct letters, A–F, on lines 21–23 on your answer sheet.

- A** learning to talk at a later than normal age
- B** trouble with new vocabulary
- C** leaving big spaces between words
- D** problems following directions
- E** difficulty turning the pages of a book
- F** inability to give commands

**Questions 24–26**

Which of the following are treatments for dyslexia mentioned in the passage? Choose THREE answers from the list below and write the correct letter, A–F, on lines 24–26 on your answer sheet.

- A** using special computers
- B** learning to identify sounds
- C** wearing eyeglasses
- D** attending a special school
- E** covering one eye while reading
- F** listening to tapes
