

Identifying Proper, Mixed and Improper Fractions

All fractions have similar features. These include the **numerator**, **denominator** and **vinculum**.

There are different types of fractions. These include **proper**, **improper** and **mixed numbers**.

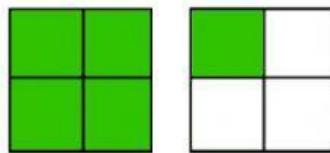

Proper	Improper	Mixed Numbers
<p>The numerator is smaller than the denominator.</p> <p>Proper fractions are worth less than a whole.</p>	<p>The numerator is larger than the denominator.</p> <p>Improper fractions are worth more than a whole.</p>	<p>Includes both whole numbers and fractions.</p> <p>Mixed Numbers are worth more than a whole.</p>
<p>E.g. $\frac{3}{4}$</p> 	<p>e.g. $\frac{7}{4}$</p> 	<p>e.g. $1\frac{3}{4}$</p> 

Type into the box to label these fractions as either **proper**, **improper** or **mixed**

$\frac{9}{10}$		$1\frac{2}{3}$	
$2\frac{1}{3}$		$\frac{100}{2}$	
$\frac{9}{7}$		$\frac{8}{15}$	
$\frac{6}{3}$		$9\frac{1}{2}$	

Converting between Mixed and Improper Fractions

E.g.

$$\begin{array}{c}
 \begin{array}{c} 5 \text{ quarters} \\ \downarrow \end{array} & \begin{array}{c} 1 \text{ whole} \\ \downarrow \end{array} & \begin{array}{c} + 1 \text{ quarter} \\ \downarrow \end{array} \\
 = \frac{5}{4} & = 1 \frac{1}{4}
 \end{array}$$

Convert between improper and mixed numbers (don't simplify)
