# Calculating Change Using Subtraction

One way we can calculate change is by subtracting the cost of a purchase from the amount of money given to the cashier. Here is an example:

$$\begin{array}{r} \$10.00 \\ - \$3.00 \\ \hline \$7.00 \end{array}$$

**Here are some for you to try:**

$$\begin{array}{r} \$5.00 \\ - \$2.00 \\ \hline \end{array} \qquad \begin{array}{r} \$5.00 \\ - \$3.00 \\ \hline \end{array} \qquad \begin{array}{r} \$10.00 \\ - \$5.00 \\ \hline \end{array}$$

$$\begin{array}{r} \$10.00 \\ - \$6.00 \\ \hline \end{array} \qquad \begin{array}{r} \$14.00 \\ - \$13.00 \\ \hline \end{array} \qquad \begin{array}{r} \$15.00 \\ - \$12.00 \\ \hline \end{array}$$

$$\begin{array}{r} \$15.00 \\ - \$11.00 \\ \hline \end{array} \qquad \begin{array}{r} \$20.00 \\ - \$18.00 \\ \hline \end{array} \qquad \begin{array}{r} \$20.00 \\ - \$16.00 \\ \hline \end{array}$$

$$\begin{array}{r} \$25.00 \\ - \$21.00 \\ \hline \end{array} \qquad \begin{array}{r} \$30.00 \\ - \$22.00 \\ \hline \end{array} \qquad \begin{array}{r} \$35.00 \\ - \$31.00 \\ \hline \end{array}$$

| | | |
|---|---|---|
| $40.00<br>- $ 23.00 | $40.00<br>- $ 29.00 | $45.00<br>- $ 42.00 |
| $48.00<br>- $ 45.00 | $50.00<br>- $ 27.00 | $50.00<br>- $ 35.00 |
| $50.00<br>- $ 17.00 | $60.00<br>- $ 54.00 | $70.00<br>- $ 57.00 |
| $70.00<br>- $ 61.00 | $75.00<br>-$72.00 | $80.00<br>-$71.00 |
| $90.00<br>- $ 75.00 | $100.00<br>- $ 65.00 | $100.00<br>- $ 43.00 |
