# Computer Memory

storage devices are used to store data and information.

Computer Memory

| Main Memory                | Secondary Memory       |
|----------------------------|------------------------|
| Random Access Memory (RAM) | Magnetic media devices |
| Read Only Memory (ROM)     | Optical media devices  |
| Cache Memory               | Solid state devices    |

## Secondary Memory

Secondary Memory or the Secondary Storage is the device which stores data and information permanently. This is also called External Storage. There are internal storage devices as well as external portable secondary storage devices. Secondary memory is called non-volatile memory since it does not erase when electricity is not available. These can be classified as follows.

1. Magnetic media devices
  - Hard Disk
  - Floppy Disk
  - Magnetic Tape
2. Optical media devices
  - CD
  - DVD
  - Blue Ray
3. Solid state devices
  - USB flash drive
  - Memory card
  - Magnetic Tape
