

**Have you read the news recently our planet is suffering severe destruction?**

It says there will be a water shortage very soon if we do not start doing something fresh water is a real concern. I'm going to start saving some water we need to take shorter showers I'm starting tomorrow. People in my town are going to have vegetable gardens so they will grow their own food without toxic chemicals we are going to help reduce mono cultures. Some small villages in Europe are going to use solar panels to produce electricity during the summer and they say it will reduce the consumption of energy. In the future most cities will use alternative energy resources a documentary said that due to large scale fishery and wailing marine life is endangered and most will disappear in a few years. And plastic is a problem scientists say by 2030 there will be more plastic than fish in the oceans. My friends are trying reusable bags for shopping and containers for take out meals and I am going to start using my reusable bottle. Not only is marine life in danger but hundreds of land species too we all have to start reducing the emission of greenhouse gases.

Listen to someone talk about plans to help the Earth recover and avoid great destruction in the coming years. Underline the correct statement according to what you hear.

1. What will happen to water in the future?  
There will be a lot.  
There will be a little.
2. What will help reduce energy consumption?  
Growing your own food.  
Using solar panels.
