Changes in care giving roles

With the burden of financial support reduced, and with a changing concept of a father's role, modern day fathers tend to be more involved in children's care giving. They are now spending more time and energy on their children. Psychological research across families from all ethnic backgrounds suggests that the influence of a father's love and attention is as great as that of a mother's. Fatherly love helps children develop a sense of their place in the world, which helps their social and emotional development. Moreover, children **who** receive more love from their fathers are less likely to have behavioural problems. This trend is still increasing and its effects will become clearer and clearer in the future, especially in traditionally male-dominated societies.
