

Operaciones combinadas con sumas y restas.

1- Operaciones combinadas con paréntesis.

$$132 + (54 - 24) = \square$$

$\square + \square = \square$

$$325 - (115 + 100) = \square$$

$\square - \square = \square$

$$(180 - 30) + 150 = \square$$

$\square + \square = \square$

$$(345 - 25) + 260 = \square$$

$\square + \square = \square$

2- Operaciones combinadas sin paréntesis.

$$700 - 50 + 230 = \square$$

$\square + \square = \square$

$$425 + 50 - 60 = \square$$

Diagram illustrating the order of operations for the expression $425 + 50 - 60$. The first step is to add 425 and 50, with arrows pointing to a box. The second step is to subtract 60 from the result, with an arrow pointing to another box. Finally, arrows from both boxes point to a larger box representing the final result.

$$160 - 140 + 180 = \square$$

Diagram illustrating the order of operations for the expression $160 - 140 + 180$. The first step is to subtract 140 from 160, with arrows pointing to a box. The second step is to add 180 to the result, with an arrow pointing to another box. Finally, arrows from both boxes point to a larger box representing the final result.

$$145 + 35 - 60 = \square$$

Diagram illustrating the order of operations for the expression $145 + 35 - 60$. The first step is to add 145 and 35, with arrows pointing to a box. The second step is to subtract 60 from the result, with an arrow pointing to another box. Finally, arrows from both boxes point to a larger box representing the final result.
