Solar System and the Milky way

Watch Dr. Binocs videos about the solar system and the Milky way and do the following exercises.

1. Complete the names of the planets. Do you remember? Here you have a fun way to help you remember the order 😉

2. Read the sentences and write T for true and F for false.

a. Venus is the coolest planet

b. Carbon dioxide traps heat inside

c. The moon is Earth's star

d. A year in Mercury is 88 years long

e. Jupiter has 4 moons

f. Uranus is the largest plante in our solar system

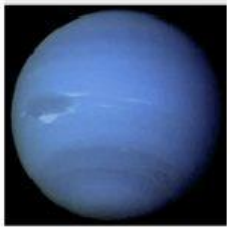

g. Titan is one of Saturn's smallest moons

LIVEWORKSHEETS

3. Choose the correct answer.

- How is everything in a galaxy held together?
- Who gave the name to the Milky way?
- How old do they think our galaxy is?
- What do scientists think our galaxy really is?
- How will our galaxy die?
- What is a local group?
- Which are the three largest galaxies in our local group?

4. Match the description with the planet.

URANUS	NEPTUNE	MARS	VENUS	SATURN
				
It takes like 165 Earth years to revolve the Sun	It has about 150 frozen moons around it	Its temperature drops about -224 degrees	It is home to some of the largest dust storms	The hottest planet in the solar system
