

M Right. Then I think you'll find the first part of the [redacted] as you go in is quite [redacted]. It's all about electronics and how we can use them to protect the world around us – you know, the [redacted] and what we can do to avoid damaging it further.

I Protecting the environment. That sounds [redacted]. Anything I should specially look out for there?

M There are lots of new devices. One which fascinated me when I went round was a new instrument for measuring how the [redacted] of the ocean changes at different levels, and this can be done from a ship on the [redacted] right down to the bottom.

I Great, I'll look out for that.

M OK, and I see you've got your son with you, which is nice because the subject of the next section is all about different things for keeping an eye on your children and looking after their safety. It contains a range of things, from electronic instruments used in medicine to children's electronic games and even a number of new [redacted] to prevent children from having an [redacted] when they're at home.

I That sounds useful.

M Yes, there's even an [redacted] for older children – you'll see a demonstration of it while you're there – which helps parents to make sure their kids are going to school. Really useful in families where both parents work. It sort of electronically tells parents about their kids' attendance and sends them a signal via the [redacted]

I Very convenient. But my son is a bit young to worry about that yet. Are there any other sections which feature [redacted]?

M Sure. There's another section – it's the third you come to, I think – which should interest everyone. It contains lots of new electronic [redacted] or devices for looking after and working with money – you know, like that thing you must have heard of which counts what you're putting into your supermarket trolley and adds up the bill as you go around.

I Right, money – that sounds interesting, too. Well, thanks for the information. I'd like tickets for myself and my son for those three sections, then, please.
