

Where Does All the Paper Go?

When paper is recycled, it doesn't just become recycled paper. It is made into many different new products. Some of these products include boxes of cereal and shoes. Recycled paper can also be used to make egg cartons, paper towels, and tissues. Some recycled paper helps people send messages to friends and family when it becomes greeting cards. Along with other resources, paper waste becomes plaster boards for the walls of homes and tar paper for under roofs. Even our cars may have paper waste in the form of stiffening for doors and sun visors.

After reading the example of information paragraph, answer the following questions.

1. What is the main idea of the information paragraph?

2. What are four products made from recycled paper? _____

3. Write one detail sentence from the paragraph. _____
