

$$a) \begin{cases} 5x - 2y = 4 \\ 3x + 4y = 18 \end{cases}$$

Calcule los determinantes

$$\Delta S = \begin{vmatrix} & \\ & \end{vmatrix} =$$

$$\Delta x = \begin{vmatrix} & \\ & \end{vmatrix} =$$

$$\Delta y = \begin{vmatrix} & \\ & \end{vmatrix} =$$

Dé las soluciones del sistema

$$x = \frac{\Delta x}{\Delta S} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

simplificar

$$y = \frac{\Delta y}{\Delta S} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

simplificar

$$b) \begin{cases} x + 5y = 5 \\ 3x - 5y = 3 \end{cases}$$

Calcule los determinantes

$$\Delta S = \begin{vmatrix} & \\ & \end{vmatrix} =$$

$$\Delta x = \begin{vmatrix} & \\ & \end{vmatrix} =$$

$$\Delta y = \begin{vmatrix} & \\ & \end{vmatrix} =$$

Dé las soluciones del sistema

$$x = \frac{\Delta x}{\Delta S} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

simplificar

$$y = \frac{\Delta y}{\Delta S} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

simplificar
