

Questions 28–32

Complete the summary below.

Choose **ONE WORD ONLY** from the text for each answer.

Write your answers in boxes 28–32 on your answer sheet.

The discovery of *Tongtianlong*

This species of dinosaur has only recently been found in an area of China.

Scientists believe that it was bird-like in appearance and probably no bigger than a

28 It is thought to have eaten 29 and it used its

30 to get through their hard exterior. The fossil of *Tongtianlong* was

found surrounded by 31 under the ground where the foundations of a

new 32 were being dug.

I was recently part of a team of palaeontologists that discovered a new dinosaur. Living in what is now China, the species would have resembled a strange bird. It was about the size of a sheep and covered in feathers, with a sharp beak that it probably used to crack open shellfish. It was given the formal scientific name *Tongtianlong*, but we called it 'Mud Dragon' because its skeleton was discovered in rock that had hardened from ancient mud. It seems that the creature got trapped in the mud and died. Then its fossil remains were found a few months ago when workmen were excavating a site in order to build a school.
