How are Alloys Manufactured ?

Inside the Box Arrange in order

- The two elements are mixed and they are poured into molds to solidify.
- To create an alloy, the metals are heated until they are molten.
- The resulting alloy is a combination of the two elements.

FILL IN THE BLANKS :

Nichrome is an _____.

Nichrome is a combination of nickel & _____.

Select an application of Nichrome : _____.

Nichrome has _____ melting points.

Nichrome is used in _____ elements.

Nichrome has _____ conductivity.

Nichrome resist _____ & _____.
