

## The organ systems of the human body

A system is formed by many organs working together. All of the systems have specialized functions but they are related to one another. There are 12 systems in the human body.

### 1. Match the name of the system to the image.

Endocrine System	Circulatory System	Skeletal System	Nervous System	Lymphatic System	Digestive System	Respiratory System	Integumentary System	Muscular System	Urinary System	Reproductive System
------------------	--------------------	-----------------	----------------	------------------	------------------	--------------------	----------------------	-----------------	----------------	---------------------

### 2. Complete the table by dragging the definitions and functions to the correct box.

System	Definition and Function	
Skeletal system		Support and Movement
Muscular system		
Integumentary system		Body covering
Nervous System		Integration and Coordination
Endocrine System		
Circulatory system		Transport
Lymphatic system		
Digestive System		Absorption and Excretion
Respiratory system		
Urinary system		
Reproductive system	The male reproductive system consists of the testes, penis, and sperm. The female reproductive system consists of ovaries, uterine tubes, uterus, vagina, and external genitalia. It produces new organisms.	Reproduction

It consists of bones and ligaments. It supports, protects, and houses blood forming tissues.

It includes all of the glands that secrete hormones. It helps to integrate metabolic functions.

It includes skin, hair, and nails. It covers the body and helps regulate body temperature.

It consists of the heart and blood vessels. It distributes oxygen and removes wastes from the cells.

It consists of the muscles. It provides body movement and posture.

It consists of the kidneys, ureters, bladder, and urethra. It removes wastes from the blood.

It consists of lymphatic vessels, lymph nodes, thymus, and spleen. It drains excess tissue.

It includes the lungs, nose, pharynx, and trachea. It carries air between the lungs and the exterior.

It consists of the mouth, esophagus, stomach, and intestines. It digests food.

It consists of the brain, spinal cord, and nerves. It sends impulses to muscles and glands..
