

## PROPRIADEDE DISTRIBUTIVA 5.2

A propriedade distributiva é muito útil nomeadamente para ajudar a fazer cálculos rapidamente.

Ex:

$$15 \times 3 = (10 + 5) \times 3 = 10 \times 3 + 5 \times 3 = 30 + 15 = 45$$

$$28 \times 2 = (30 - 2) \times 2 = 30 \times 2 - 2 \times 2 = 60 - 4 = 54$$

1)  $19 \times 5 = ( \quad - \quad ) \times \quad = \quad \times \quad - \quad \times \quad = \quad - \quad =$

2)  $36 \times 3 = ( \quad + \quad ) \times \quad = \quad \times \quad + \quad \times \quad = \quad + \quad =$

3)  $24 \times 4 = ( \quad + \quad ) \times \quad = \quad \times \quad + \quad \times \quad = \quad + \quad =$

4)  $15 \times 8 = ( \quad + \quad ) \times \quad = \quad \times \quad + \quad \times \quad = \quad + \quad =$

5)  $29 \times 8 = ( \quad - \quad ) \times \quad = \quad \times \quad - \quad \times \quad = \quad - \quad =$

6)  $17 \times 5 = ( \quad - \quad ) \times \quad = \quad \times \quad - \quad \times \quad = \quad - \quad =$

---

1)  $12 \times 4 = ( \quad + \quad ) \times \quad = \quad \times \quad + \quad \times \quad = \quad + \quad =$

2)  $13 \times 7 =$

3)  $18 \times 5 =$

4)  $17 \times 4 =$

5)  $14 \times 3 =$
