

Transformar fracciones impropias en números mixtos.

a. $\frac{11}{3} = \square \frac{\square}{\square}$

f. $\frac{13}{6} = \square \frac{\square}{\square}$

b. $\frac{15}{4} = \square \frac{\square}{\square}$

g. $\frac{10}{8} = \square \frac{\square}{\square}$

c. $\frac{22}{5} = \square \frac{\square}{\square}$

h. $\frac{13}{2} = \square \frac{\square}{\square}$

d. $\frac{19}{2} = \square \frac{\square}{\square}$

i. $\frac{20}{6} = \square \frac{\square}{\square}$

e. $\frac{34}{7} = \square \frac{\square}{\square}$

j. $\frac{12}{5} = \square \frac{\square}{\square}$
