

Order the map picture with the correct definition of them.

	Political Maps Political maps show the features people have created, such as cities, states, provinces, territories, and countries. State and country boundaries can also be outlined on these types of maps. A political map of a smaller area, such as a state, often shows county boundaries.
 Political map of Spain	Thematic Maps A thematic map includes certain information about a place or region. For example, the thematic map on this page shows the climates in Brazil. Thematic maps can use colours, symbols, lines, or dots to help you see patterns. The map's title and legend will help you understand the theme and the information presented. In this textbook, you will find thematic maps on such topics as historical events, vegetation, and population density.
	Physical Maps On a physical map, you can see what Earth's surface might look like from space. Physical maps show the landforms and bodies of water found in particular areas. Colours are often used to show elevations. On the map above, for example, brown indicates higher, more mountainous areas. Green shows areas that are relatively flat.

 A political map of South America with Brazil highlighted in green. Neighboring countries are labeled: Venezuela, Colombia, Ecuador, Peru, Bolivia, Paraguay, Argentina, and Uruguay. Major cities like Rio de Janeiro, São Paulo, and Brasília are marked. The map includes a compass rose, a scale bar, and a legend for international boundaries, national capitals, and other cities. A text box asks: 'GEOGRAPHY SKILLS/LEVEL: INTERPRETING MAPS Location: In what part of Brazil is Rio de Janeiro located?'.	Relative Location
 A small globe showing the continents in orange against a blue background of the oceans.	Latitude and Longitude
 A physical map of the world showing landforms and bodies of water. The map uses a grid of latitude and longitude lines. Landmasses are colored in shades of brown and green to represent elevation. The Prime Meridian (0°) and the Equator (0°) are clearly marked. Latitude lines are labeled from 0° to 60° North and South. Longitude lines are labeled from 0° to 180°.	Physical Maps On a physical map, you can see what Earth surface might look like from space. Physical maps show the landforms and bodies of water found in particular areas. Colours are often used to show elevations. On the map above, for example, brown indicates higher, more mountainous areas. Green shows areas that are relatively flat.
