The earth is getting \_\_\_\_\_. Huge Glacial drift is melting and causing our sea levels to \_\_\_\_\_. This causes flooding in coastal areas, including near my home in the west of Ireland. Climate Change is a hot topic. Greta Thunberg has motivated thousands of young people to take a stand for \_\_\_\_\_ and to stand up to politicians. David Attenborough told us about plastic in the oceans wiping out many species and \_\_\_\_\_ many more. My school is a “Green School”. We learn about biodiversity and all have ideas of how to save our planet.

I was thinking about these ideas when suddenly Covid 19 stopped us in our tracks. Everything stopped. Not only was I grounded, \_\_\_\_\_ were grounded, boats were docked and cars left in their driveways. What was happening to the planet as we stayed at home? The international Space Station has been seeing blue skies all over the world as \_\_\_\_\_ falls drastically. Dolphins are swimming up the canals of Venice. Ducks are happily \_\_\_\_\_ in Rome’s Trevi Fountain. What an opportune time for our sick and ailing \_\_\_\_\_. So what will happen to our planet from now on? I hope we will learn from this time lived through Covid 19, when the earth, water and \_\_\_\_\_ became pure because we became still. We’ll remember how we look after each other. We are all \_\_\_\_\_ in the circle of life. “Human ARE nature”, Greta said.
